WORK EXPERIENCE

Brisklabs.dev - *Web Developer*   *March 2023 - Present*

- Design and develop a **full restaurant management** system from scratch, including user authentication, menu management, and order tracking, improving operational efficiency using **React** and **Tailwind**.
- Resolve technical issues and feature updates on a case-by-case basis, ensuring smooth system functionality and timely client support.
- Collaborate closely with Backend Developers and the Product Manager to define and integrate future features, aligning development with business requirements.

Nodies - *Senior Applications Developer*   *Dec 2023 - Aug 2024*

- Developed and implemented new features for the Nodies platform, including **Stripe** integration for seamless payment processing.
- Refactored existing code to enhance optimization and maintainability, reducing **query processing time by more than 50%**.
- Led a development team of software developers, providing guidance and best practices to improve code quality and efficiency.

iScale Solutions - *Software Engineer*   *Oct 2019 - Mar 2022*

- Developed and delivered an average of **two major features per month** as per Sprint Planning, ensuring timely releases.
- Presented and demoed newly developed features to the Product Manager, fostering positive interactions and reducing misunderstandings.
- Resolved all reported bugs and performance issues within the two-week sprint cycle, ensuring no delays or extensions.
- Conducted code reviews to uphold best practices and mentor junior developers, improving overall team efficiency.
- Implemented automated testing using **Selenium**, increasing test coverage and reducing manual testing efforts.

Zennya - *Backend Developer*   *Jan 2019 - June 2019*

- Developed and optimized APIs for mobile and web applications using **Grails**.
- Researched and implemented key **proof of concepts (PoCs)**, including:
  - **OCR Scanner:** Extracted and persisted data from images into the database.
  - **Facebook AI Chatbot Integration:** Enabled automated customer service interactions through structured data feeds.
- Documented all API endpoints and new features using **Confluence** and **Jira**, improving knowledge sharing and onboarding efficiency.

GreatFeat Services Inc - *Software Developer*   *May 2017 - Nov 2018*

- Consolidated two separate projects—a web application and a mobile application—into a single **Web Service API**, enabling both platforms to connect to a unified backend. Migrated the legacy system to **Spring Boot** and **Hibernate**, which improved maintainability, scalability, and development efficiency while reducing redundancy and streamlining future development.
- Developed and maintained a web service to manage new game platforms, ensuring seamless integration with existing systems.
- Resolved critical bugs and performance issues, ensuring system stability and reliability.
- Optimized database performance by modifying fields and restructuring database architecture.

NTT Global Communications - *Software Engineer*   *Oct 2013 - May 2017*

- **Virtela View Customer Portal & Web Service:** Developed and enhanced new features, resolved bugs, and provided technical support to clients, ensuring seamless integration with existing systems.
- **NFV Billing Software:** Designed and built the project from scratch using **Oracle ADF** and **WebLogic Server 11g**, delivering a fully functional billing system within a tight timeline. **Traveled to India multiple times** to train end users on how to use the application and new developers on the system architecture and codebase.
- Managed automated application releases using **Jenkins**, ensuring smooth deployment with minimal downtime in the production environment.
- Resolved issues reported by the QA team, improving system stability and performance.

Engage Outsourcing Inc- *Quality Analyst/ Software Developer*   *Sept 2012 - May 2013*

- Prepared and executed test cases for **Unit**, **Regression**, and **Functional Testing**, ensuring high-quality deliverables and defect-free releases.
- Developed and optimized stored procedures to support project functionality, enhancing data retrieval and manipulation.
- Designed and implemented the Administrator and Reports modules, improving user access and report generation efficiency.
- Collaborated with the client during team meetings to gather project requirements and set timelines, ensuring alignment with client needs.

EDUCATION

Central Philippines University - BS Information Technology   *2006 - 2011*
